Andrew: Innovation from the start

1990s

A CRINE-era development, unlocking value from smaller reservoirs with a collaborative, risk/ reward sharing approach

2010s

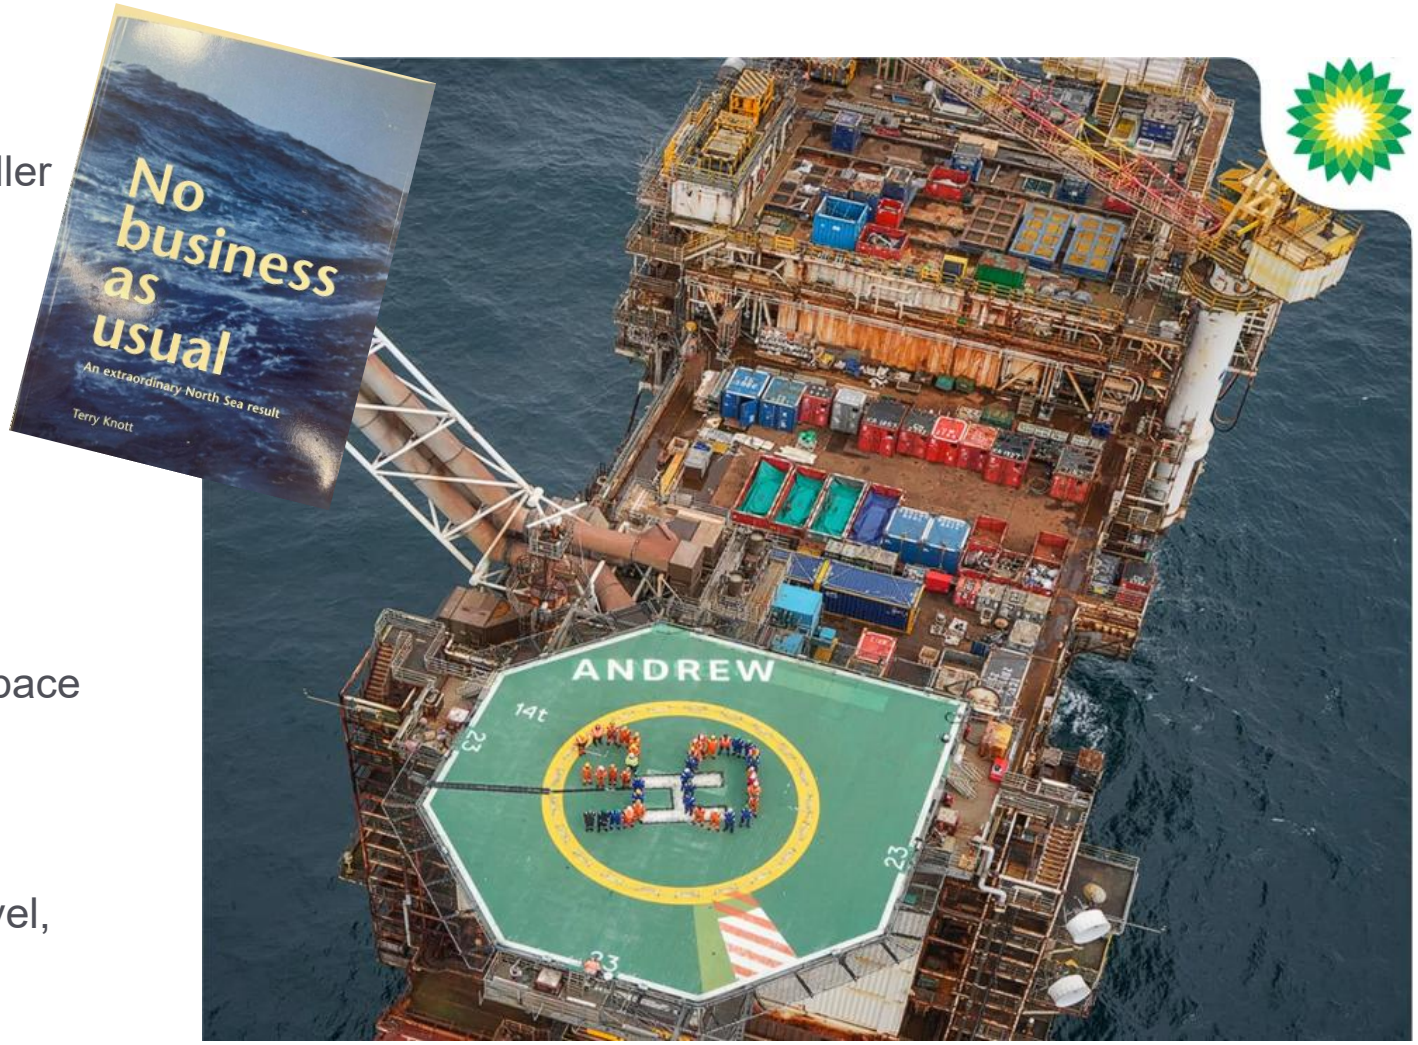
Andrew Area Development ties back subsea fields

2020s

Andrew Late Life Business Model applies simplified operations approach to extend asset life and create space for decom activity

2020 – 2030s

bp takes its outsourced decom strategy to the next level, working with THREE60-AF as our integrated delivery partner – and our first Well Operator



Confidential

A new partnership for Andrew's final challenge

Complementary capability

THREE60 operations, wells and project delivery, alongside AF Decom's preparation, removal and disposal expertise.

Building on an evolving approach

From post-CoP Duty Holder solutions towards earlier engagement throughout late life.

An integrated offer to bp

Plan and prepare while producing, with the aim of reducing the post-CoP run-down.

Commercially aligned

Fair risk and reward, clear accountabilities and the right specialists at the right stage.

AF Offshore Decom

Successes and challenges

Real progress — one team in the making

Significant enabling work delivered while different organisations establish a shared way of working.

Parallel production and decommissioning

The prize is clear, the intent is strong, the practicalities are hard on a small platform

Dual well operatorship on one platform

Distinct responsibilities, but shared offshore capacity, access, SIMOPS and everyday interfaces.

Discovery scope and changing assumptions

Wells complexity, brownfield conditions and programme changes demand pragmatic, timely decisions.

Confidential

Reflections: what makes the difference?

Culture

One team in practice: speak up, challenge and own the shared outcome.

Domain knowledge

People who know the asset, supported by wells and decommissioning expertise.

The right controls

A robust Safety Case and Control of Work, proportionate to the risk.

Timely decisions

Best available evidence, clear authority and sound judgement when the picture is incomplete.

The model has evolved. The fundamentals remain.
